6.1. Management of Change	15
6.2. Annual Reporting Process	15
6.3. Verification and Auditing	16

APPENDICES

APPENDIX I	FUEL CONSUMPTION REPORT (Noon Report Template)
APPENDIX II	CALIBRATION LOG
APPENDIX III	SAMPLE VOYAGE LOG
APPENDIX IV	BUNKER DELIVERY NOTE (BDN) EXAMPLE
APPENDIX V	CALIBRATION CERTIFICATES LIST
APPENDIX VI	MONITORING METHOD SUMMARY
APPENDIX VII	RELEVANT INFORMATION

1. INTRODUCTION

1.1 Scope and Objective

This MRV Monitoring Plan has been developed to ensure full compliance with the applicable regulations for the monitoring, reporting and verification of carbon dioxide (CO_2) emissions from maritime transport. The objective of this Plan is to establish clear and effective procedures for:

- Continuous monitoring of fuel consumption and CO_2 emissions
- Accurate data collection and recording
- Timely reporting to relevant authorities
- Ensuring data quality and integrity throughout the process

This Plan applies to all voyages and port activities of the vessel and shall be followed by all personnel involved in data collection and reporting.

1.2 Regulatory References

This document has been prepared in accordance with the following international and regional regulations:

Authority	Regulation Reference	Description
EU	Regulation (EU) 2015/757	Monitoring, reporting and verification of CO_2 emissions from maritime transport (as amended by EU 2023/957).
UK	UK MRV Regulations 2018	The Merchant Shipping (Monitoring, Reporting and Verification of CO_2 Emissions) Regulations 2018 (as amended).
IMO	MARPOL Annex VI, Reg. 22A	IMO Data Collection System (DCS) for fuel oil consumption of ships.
Coastal States	Various National Laws	Local requirements for emissions monitoring in territorial waters.

1.2.1 Definitions

BDN (Bunker Delivery Note): The document provided by the fuel supplier at the time of bunkering, detailing the quantity and type of fuel delivered, along with its density and sulphur content.

DCS (Data Collection System): The IMO system for collecting and reporting fuel oil consumption data from ships, as required under MARPOL Annex VI, Regulation 22A.

Emission Factor: A coefficient that quantifies the emissions of CO_2 per unit of fuel consumed, expressed in tons of CO_2 per ton of fuel (t CO_2/t fuel). Default factors are provided by IPCC and MRV guidelines.

EU MRV: The European Union's Monitoring, Reporting and Verification regulation for CO_2 emissions from maritime transport (Regulation (EU) 2015/757 as amended). **UK MRV:** The United Kingdom's national MRV regulation (The Merchant Shipping (Monitoring, Reporting and Verification of CO_2 Emissions) Regulations 2018), which applies to ships calling at UK ports. **THETIS-MRV:** The European Commission's information system for managing and verifying MRV data submitted by shipping companies.

IPCC: Intergovernmental Panel on Climate Change, which provides default emission factors for fuel combustion.

Noon Report: A daily report prepared by the Chief Engineer, summarizing fuel consumption, distance travelled, cargo carried, and other operational data, typically submitted at 12:00 ship's time.

SFOC (Specific Fuel Oil Consumption): The fuel consumption rate of an engine per unit of power output, expressed in grams per kilowatt-hour (g/kWh).

Verifier: An independent, accredited body responsible for assessing the conformity of the Monitoring Plan and the Emission Report with the applicable regulations.

Voyage: A journey from one port to another, with start and end times defined as "ropes-off" and "ropes-on" respectively.
